

Cyber Liability

A rapidly increasing risk in radiology.

\$150–\$200

Average cost of a data breach per compromised record

Are you covered?

Most radiologists and radiology practices have little or no coverage for privacy breaches—even though patient data is 10 to 20 times more valuable on the black market than credit card data.

Here's how we can help:

Full coverage for direct, first-party costs, third-party losses and regulatory actions resulting from a security or data breach.

Access to a **global service platform**—from legal and IT forensics to credit monitoring and notification expenses—for breach response.

Coverage can extend to **lost income** and operating expenses, extortion, online defamation, copyright infringement and more.

Seamless coverage within IT departments and infrastructures that use eRAD technology.

RadInsure provides access to coverage and pricing not normally available to radiology groups and imaging centers. We leverage the best practices and purchasing power of the largest owner-operated network of imaging centers in the U.S.
